Mental Health Statistics

Access to Care Ranking

61.4%¹ of adults with Any Mental Illness (AMI) in Florida did not receive treatment
National average – **56.4%**¹

The Access Ranking indicates how much access to mental health care exists within a state. The access measures include access to insurance, treatment, special education, employment, and the quality and cost of insurance. A ranking of 1 indicates that a state provides access to the most amount of insurance and mental health treatment in the U.S. A ranking of 50 indicates the least amount of access to insurance and mental health treatment in the U.S. Florida's ranking compared to other states is displayed in detail below.

Florida Ranks 43rd³

Florida	670:1
Georgia	790:1
Texas	960:1

Source(s): Mental Health Providers, 2019 County Health Rankings, accessed on April 30, 2019.
 Mental Health Providers is the ratio of the county population to the number of mental health providers including psychiatrists, psychologists, licensed clinical social workers, counselors, marriage and family therapists, mental health providers that treat alcohol and other drug abuse, and advanced practice nurses specializing in mental health care. In 2015, marriage and family therapists and mental health providers that treat alcohol and other drug abuse were added to this measure. Data comes from the National Provider Identification data file.

Incarceration Statistics

Access to Care Ranking vs Adult Incarceration Rates

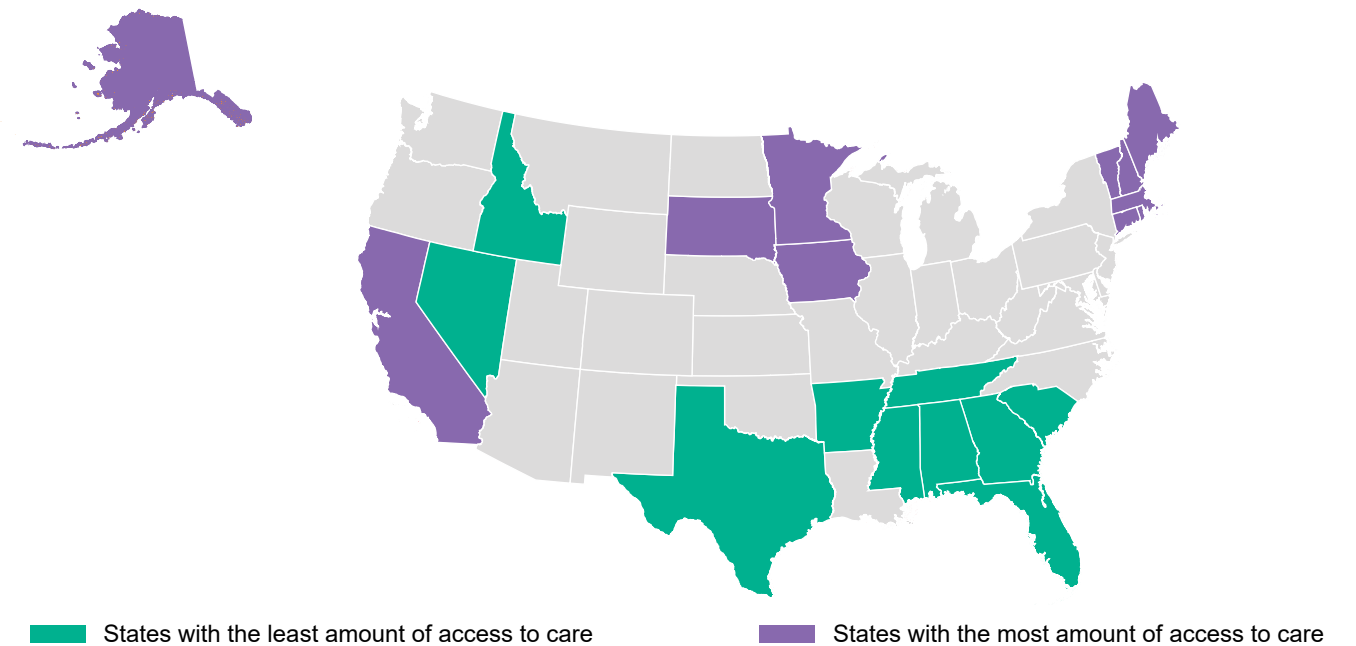

According to the Bureau of Justice Statistics, the incarceration rate in Florida stands at 720 persons per 100,000 residents, which is higher than the national average of 660. The rate was at 492 inmates per 100,000 residents in 2005, an increase of almost 50 percent between 2015 and 2016. However, this rate has decreased by 25 percent since 2014.¹³

Comparing state-by-state incarceration rates and access to mental health care ranking shows a strong positive correlation between rates of adult who are in the criminal justice system and lack of access to mental health care ($r = .69, p=000$).

6 out of the 10 states with the least access to mental health care also have the highest rates of incarceration:

- Florida • Alabama • Arkansas • Mississippi • Texas • Georgia

States with the least access to mental health care

Workplace Statistics

Work is good for mental health, but a **negative working environment** can lead to physical and mental health problems.

Depression and anxiety have a significant economic impact; the estimated cost to the global economy is \$1 trillion per year in lost productivity.²¹

Harassment and bullying at work are commonly reported problems and can have a substantial adverse impact on mental health.

There are many effective actions that organizations can take to **promote mental health in the workplace**; such actions may also benefit productivity.²¹

The World Economic Forum convened experts to develop a seven-step guide towards a mentally healthy organization. World Health Organization plans to begin development of a guideline on mental health in the workplace, working closely with the Wellcome Trust, the International Labor Organization and organizations that have vast experience in this area. The UK organization, Time to Change, is working with more than 800 employers to help change attitudes about mental health in the workplace. These new initiatives show the growing attention being paid to the importance of mental health in many areas of life.²²

Community Action Treatment Teams (CAT)

Florida's CAT teams are a shining example of what's working well in our state in treating youth with mental health and substance use disorders.

The teams involve mental health professionals who provide intensive wraparound services to teens, preteens, and their families resulting in fewer out-of-home placements.

The CAT teams have far exceeded their goals set by state policymakers. Their success has led to increased funding and expansion by lawmakers. Our hope is that future policies and funding will lead to these teams serving more youth in more areas of Florida:

- Strengthen the family and support systems for youth and young adults to assist them to live successfully in the community,
- Improve school-related outcomes such as attendance, grades and graduation rates,
- Decrease out-of-home placements,
- Improve family and youth functioning,
- Decrease substance use and abuse by children and their adult caregivers,
- Decrease psychiatric hospitalizations,
- Transition youth into age-appropriate services, and
- Increase health and wellness.

Who is eligible to participate in CAT?

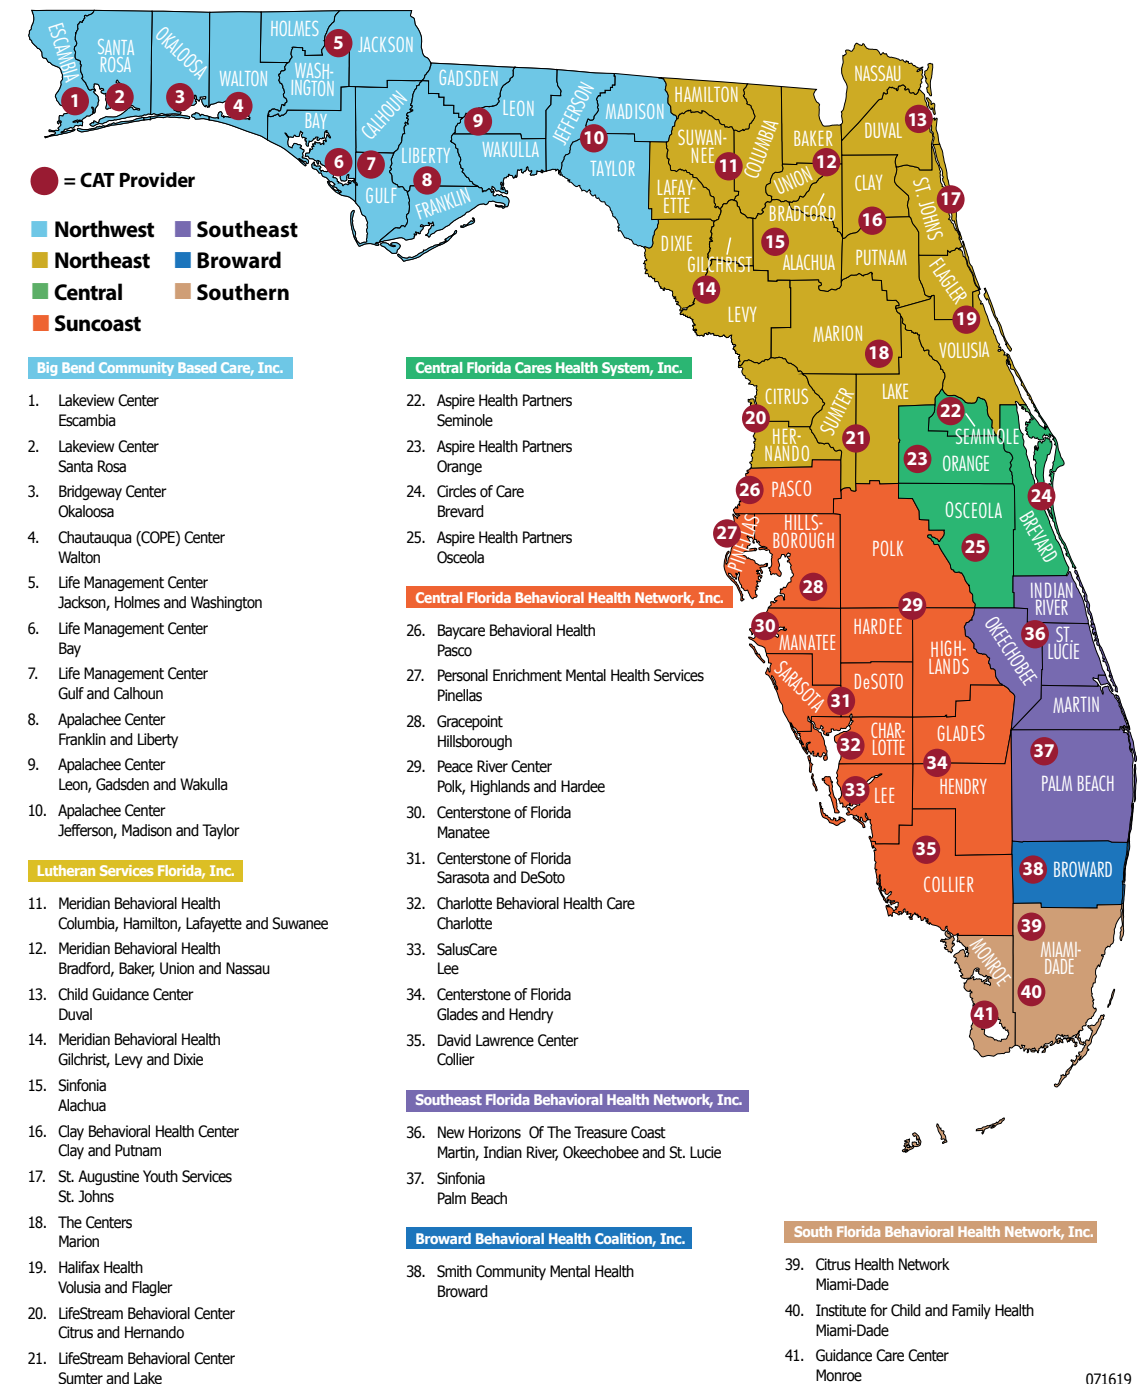

Children/Youth aged 11 to 21 with a mental health diagnosis or co-occurring substance abuse diagnosis with one or more of the following accompanying characteristics:

- The child is at-risk for out-of-home placement as demonstrated by repeated failures at less intensive levels of care;
- The child has had two or more periods of hospitalization or repeated failures;
- The child has had involvement with the Department of Juvenile Justice or multiple episodes involving law enforcement; or
- The child has poor academic performance or suspensions.

Note: Children younger than 11 with a mental health diagnosis or co-occurring substance abuse diagnosis may be candidates if they meet two or more of the above characteristics
